

Utility

Various small services and projects for CLIC that are not crucial, but come in handy.

QR Bill Generator

A handy QR Bill Generator that can be used to generate personalized bills for event participants. For example, this is used for the [Faculty Diner](#) and [IC Boost Day](#).

It is hosted at <http://clic.epfl.ch/qrbill-generator> and the source code can be found on the [repository](#).

Mail Sender

A simple mail sender that supports Liquid templates and ICS attachments. It was mainly created to use from Directus flows (that do not support ICS attachments easily). The source code can be found on the [repository](#).

Crab CLIC

A self hosted and themed instance of crab.fit. The source code can be found on the [repository](#).

KeyCLIC Theme

A simple theming for our self hosted instance of Keycloak. The source code can be found on the [repository](#).
